## Feeder Flowtech

**Davide Zenere**

BDF Industries, Italy

### Biography

Davide Zenere

Head of Mechanical Engineering, Mechanical Engineering, BDF Industries, Italy

### Abstract

Feeder Flowtech aims to automatically adjust all parameters that affect the gob using the data from Gob Scan (3D Gob shape, gob falling angle, gob temperature map, surface defects).

Feeder Flowtech analyzes and solves the root cause of possible imperfections in the gob.

The system automatically acts on Radiative Electric Forehearth, Independent Servo Plunger, and Servo Parallel Shear.
